## Alfresco living at its best!

Alfresco dining and outdoor living areas are growing in popularity as an important part of new home design. This trend in outdoor living is synonymous with Australian culture and by all indications is here to stay.

The inclusion of retractable insect screens to an alfresco room can transform an open space into a functional insect free environment maintaining the ambience of being outdoors and providing natural ventilation.

By installing retractable insect screens home owners can experience outdoor entertaining with the comfort of inside living and will appreciate the added convenience that retractable screens offer making these fashionable rooms a truly functional part of the home.

The revolutionary range of Monarch retractable insect screens introduce a new dimension in screening technology perfectly suited to screening alfresco rooms and entertainment areas.

These innovative patio screening systems use the latest in pleated retractable screen technology, they are manually operated and do not use springs to retract the mesh. The mesh cassettes are fully removable from the opening for cleaning and maintenance and can be stored away if not used for extended periods.

When not in use the insect mesh is neatly stored in protective housings to the side of the room maintaining

an open feeling to the room. The housing protects the mesh from dust and air borne pollutants providing a cleaner living environment over that of fixed screen systems. When insect protection is required the screen is easily opened to provide an insect free environment.

Incorporating our Monarch range of screens to the building design requires no structural alterations, the screen fits neatly inside the existing opening directly under the soffit. The patented floor guide is only 3mm high fits directly to the selected floor finish using double sided tape providing safe passage in and out of the room.

Our patio screen system has a building in tolerance of +/- 15mm and is delivered to site fully manufactured to exact size ready for installation. The system can cover openings up to 3.0m high by up to 10.0 metres in width.

The system is available in popular anodised and powder coat finishes that will blend with any chosen décor. Installation is a breeze and can be arranged by National Screens or through our extensive Australia wide network of distributors.

The integration of National Screens exclusive patio screening system in home designs will enhance the usable space of the home adding value, style and functionality. They really are "screens for everyday living".

Monarch Ex retractable insect screen

The Monarch range of advanced retractable insect screens will transform your patio or alfresco room into a functional insect free room.

Outdoor dining and entertainment rooms are gaining popularity as a major focal point in new home design and lifestyle. Sadly mosquitoes, flies and other annoying insects spoil the experience of outdoor living and dining.

Retractable insect screens are the perfect solution for creating an insect free environment whilst maintaining the look and feeling of an open space. Our pleated retractable insect screens store conveniently to the side of the opening when not in use and easily opened when insect protection is required.

The Monarch range of retractable insect screens provides the protection from insects that your family deserves. Our patented pleated retractable insect screens are the perfect balance of performance, functionality and aesthetic appeal adding value to your home and lifestyle.

Imagine relaxing with family and friends enjoying fresh evening breezes and dinner parties without annoying insects, this is the lifestyle you deserve.
