

Foldaway pleated retractable insect screen
“multi-panel system”

Applications

Alfresco rooms
Patio enclosures
Oversized Bi-Fold Doors
Corner Stacker Doors
Servery Windows

Overview

Foldaway is a hybrid of our flagship Monarch Ex and Monarch Maxi systems combining features of both systems into one.

Designed as a cartridge connection system this screen can span up to **4.5m in a single direction** or a massive 9m as a double screen, up 3.0m high.

To achieve these distances Foldaway connects multiple retractable panels allowing it to span greater distances whilst controlling wind load. The number of panels required are calculated based on the size of the opening to be covered.

This screen incorporates our patented barrier free threshold that means there are no channels or tracks mounted to the floor to trip over making it the safest screen to use on the market.

Foldaway has been designed as either a **recess or face mount** installation making it our most versatile product on offer and is suitable for DIY consumers and professional installers.

The robust design of Foldaway makes it the ideal for screening outdoor rooms and oversized Bi-fold doors.
