

Visionair pleated retractable insect screen
Aluminium horizontal and vertical sliding

Applications

Severy windows
Bi-fold Windows
Awning windows (hoppers)
Casement windows (push-out)
Double Hung windows

Overview

This versatile range of cost effective pleated mesh retractable insect screens is perfect for use on double hung windows, awning/casement windows, small severy installations and Bi-fold windows.

Sight lines are minimal due to the 15mm pleated mesh and slim line frame that is constructed from powder coated or anodised Aluminium.

The screen is available in **horizontal sliding** or **vertical pull-down** operation and the choice of face mount or recess mount installation. The face mount option is ideal for use on windows where there is no room to install inside the reveal or window frame.

Double sided adhesive tape is used to install the face fix screen option, eliminating unsightly fixings and improving installation times

Mesh retention clips are installed top and bottom of the mesh keeping the mesh in place in windy conditions.

The sliding bar stops at any position along the opening without the need of a brake or locking system.

There are no tension springs or counter balances used to retract the screen making it smooth and lite to operate.

The horizontal sliding option eliminates the need to reach up over benches or furniture making the screen particularly suited for use on severy or hard to reach windows.

Features

- 15mm polyester pleat
- Aluminium frame
- Face mount or recess mount installation
- Horizontal or vertical sliding
